PROFILE SUMMARY

- Python & Full-Stack Developer with hands-on experience building AI-powered and real-time systems using FastAPI, React, WebSockets, and Docker. Built projects ranging from multi-agent automation pipelines to live network analyzers and collaborative AI whiteboards, leveraging LangGraph, Groq, and OpenAI APIs. Seeking a Software Engineer / Backend Developer role in a product-based company.

EDUCATION

Master of Computer Applications (MCA) <i>RGPV University, Gwalior M.P. Expected 2027</i>	2025 – Present
Bachelor of Computer Applications (BCA) CGPA: 7.42 <i>Institute of Technology & Management (ITM), Gwalior M.P.</i>	Sep 2022 – May 2025
Senior Secondary (Class 12th) PCM 91.4% <i>Gwalior, M.P.</i>	May 2021

PROJECTS

Multi-Agent Orchestration System 🤖 | Python, LangGraph, FastAPI, WebSockets, React, Docker

- Built an AI system that reads a GitHub issue, writes a code fix, runs tests in a Docker sandbox, and opens a Pull Request — fully automated, no human needed.
- Implemented a self-correcting loop using LangGraph where the AI analyzes test failures and rewrites its own fix — reducing manual debugging effort.
- Streamed real-time agent logs to a React dashboard via FastAPI WebSockets, giving complete visibility into every step of the automation pipeline.

DPI Engine – Network Traffic Analyzer 🕵️ | Python, FastAPI, Scapy, WebSockets, Vanilla JS

- Built a packet inspection tool using Scapy that reads .pcap files and identifies which app the traffic belongs to (YouTube, Netflix) — without decrypting anything.
- Made a live monitoring dashboard with FastAPI WebSockets that streams packet data with under 1s delay for real-time network visibility.
- Added IP/domain blocking and a DDoS detection module that flags anomalies when traffic crosses 100 packets/sec.

SmartArch Board – AI System Design Whiteboard 🗺️ | React, FastAPI, Socket.IO, Supabase, Redis, Fabric.js, Groq AI

- Built a real-time collaborative whiteboard using React and Fabric.js where multiple users can draw and edit together with under 1s sync via Socket.IO and Redis.
- Connected Groq API (Llama-3-70b) so the AI can look at your architecture diagram and suggest improvements or point out bottlenecks on the spot.
- Added auto-grid, object snapping, and sticky context layers to attach code snippets or notes to any shape — all saved to Supabase PostgreSQL.

TECHNICAL SKILLS

Languages & Web: Python, JavaScript, C++, SQL, HTML5, CSS3

Frameworks & Libraries: React.js, Django, FastAPI, Tailwind CSS, Bootstrap

Databases & AI/ML: MySQL, PostgreSQL, Redis, Scikit-Learn, TensorFlow, Hugging Face APIs

AI/LLM: OpenAI API, Groq API, Prompt Engineering, RLHF (Learning), Supervised Fine-Tuning (Learning)

DevOps & Cloud: Git, Docker, Linux, WebSockets, REST APIs, OOP, DSA, AWS (EC2, ELB, ASG, Route 53)

CERTIFICATES & ACHIEVEMENTS

AWS & React: Deploy an Auto-Scaling E-Commerce App with ELB — Udemy	May 2026
Building News Website with JavaScript, React & News API — Udemy	Apr 2026
Yuva AI for All — INDIAai / Nasscom FutureSkills Prime (MeitY)	Apr 2026
Git Commands: A Complete Workshop — Udemy	Apr 2026
